

Get Sick Now!™ (GSN)

So what have we defined here, with GSN? We have defined the overall landscape of the nature of this virus we call COVID and the defined the overall set of options and realities that we have been faced with for almost 2 years now. It is clear that this COVID virus is not going away. That there is ongoing needs to manage public health while also manage the never-ending desire to change the culture and operational methods in-which this culture performs. For the good of the citizens of course!

But even here, without an approach that is not advocating for or against vaccinations (This mapping suggests actually the most vulnerable of the population pursue vaccinations) but for a tempered approach and realistic set of decisions that will get us to a natural return to "normal" where the population is able to operate freely.

There has been much discussion, as of recent day, that there are people that are pursuing the "Great Reset" under the assumptions that the world is becoming overpopulated, that over 7 Billion people cannot be sustained in the long run. That there must be a way to manage and control the world's population and thus preserve the nature and effectiveness of this planet we live on.

Per this Philosophy we are building through the Federalist 2.0, this new Federalist 2.0 philosophy rejects this notion of a constrained set of resources and the need to manage populations and cultures and societies. Only upon the reality that those that would be the watchers and the rulers, they themselves, in time, may fall victim to their own Vices. Their own jealousies and their own Hatred for others and for given decisions and situations.

As such, we must fall upon the Sovereign beings, as humans, and propose the righteous thinking that can be developed and realize that a march to the reset, socialism, communism and/or marxism, must and will lead to dictators and overlords that will destroy countless lives. So the Federalist 2.0 philosophy, accepts that all Human Beings should be free to chose their lives and how they use the natural resources of this planet; that through this process, which freedom can only bring, those that have their right minds will be able to navigate these complexities we are beginning to come upon:

- 1) Diseases and Viruses that can be created by humans and unleashed onto populations
- 2) Humanized Robots that will replace workers at alarming rates
- 3) Artificial Intelligence (AI) that will simplify and augment many millions of people's skills over time
- 4) Increasing use of technology to control everything in our environment, giving us time to consume our vices

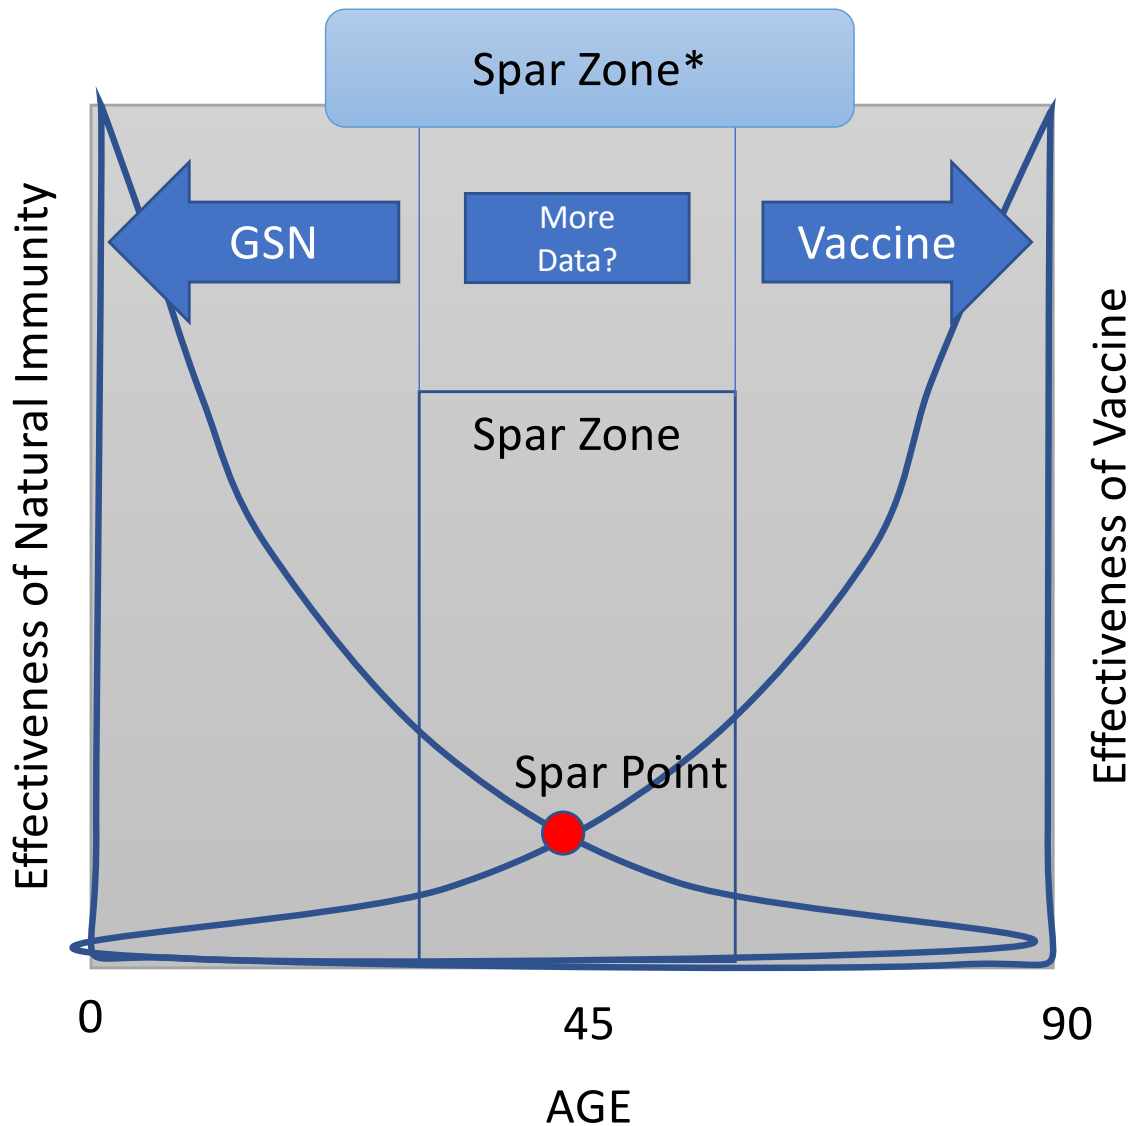

Yes, these and many more concepts are knocking at the door of time, and the most critical one that must be dealt with is the one of designer viruses with intentions to cull the population and provide mechanisms of control for those who would like to cause the reset and bring socialism to the nations of this world.

This first step, is the call to the populations to take up their God given rights to their Sovereignty and begin to plan and understand that, as people together, fighting these diseases together shall prevail, that through time many people will perish based on the probability many more "Virus Attacks" will come and many more efforts will be made to separate us and keep us afraid, hungry and desperate to be human again.

Yes, there is a business case for "Get Sick Now" and it is not one based in money, it is based in the realization there is a higher power and a soul that stirs in us all and when that calling becomes apparent, the citizens will act, and this shall be the first act... GSN Facilities to breath life into a dead world.

Publius

(c)2021 Federalist 2.0

Effectiveness as defined by ability to fight off illness:

- 1) As you age your Body's Natural Immune Effectiveness Decreases
- 2) Vaccines are more effective for those aging that cannot fight

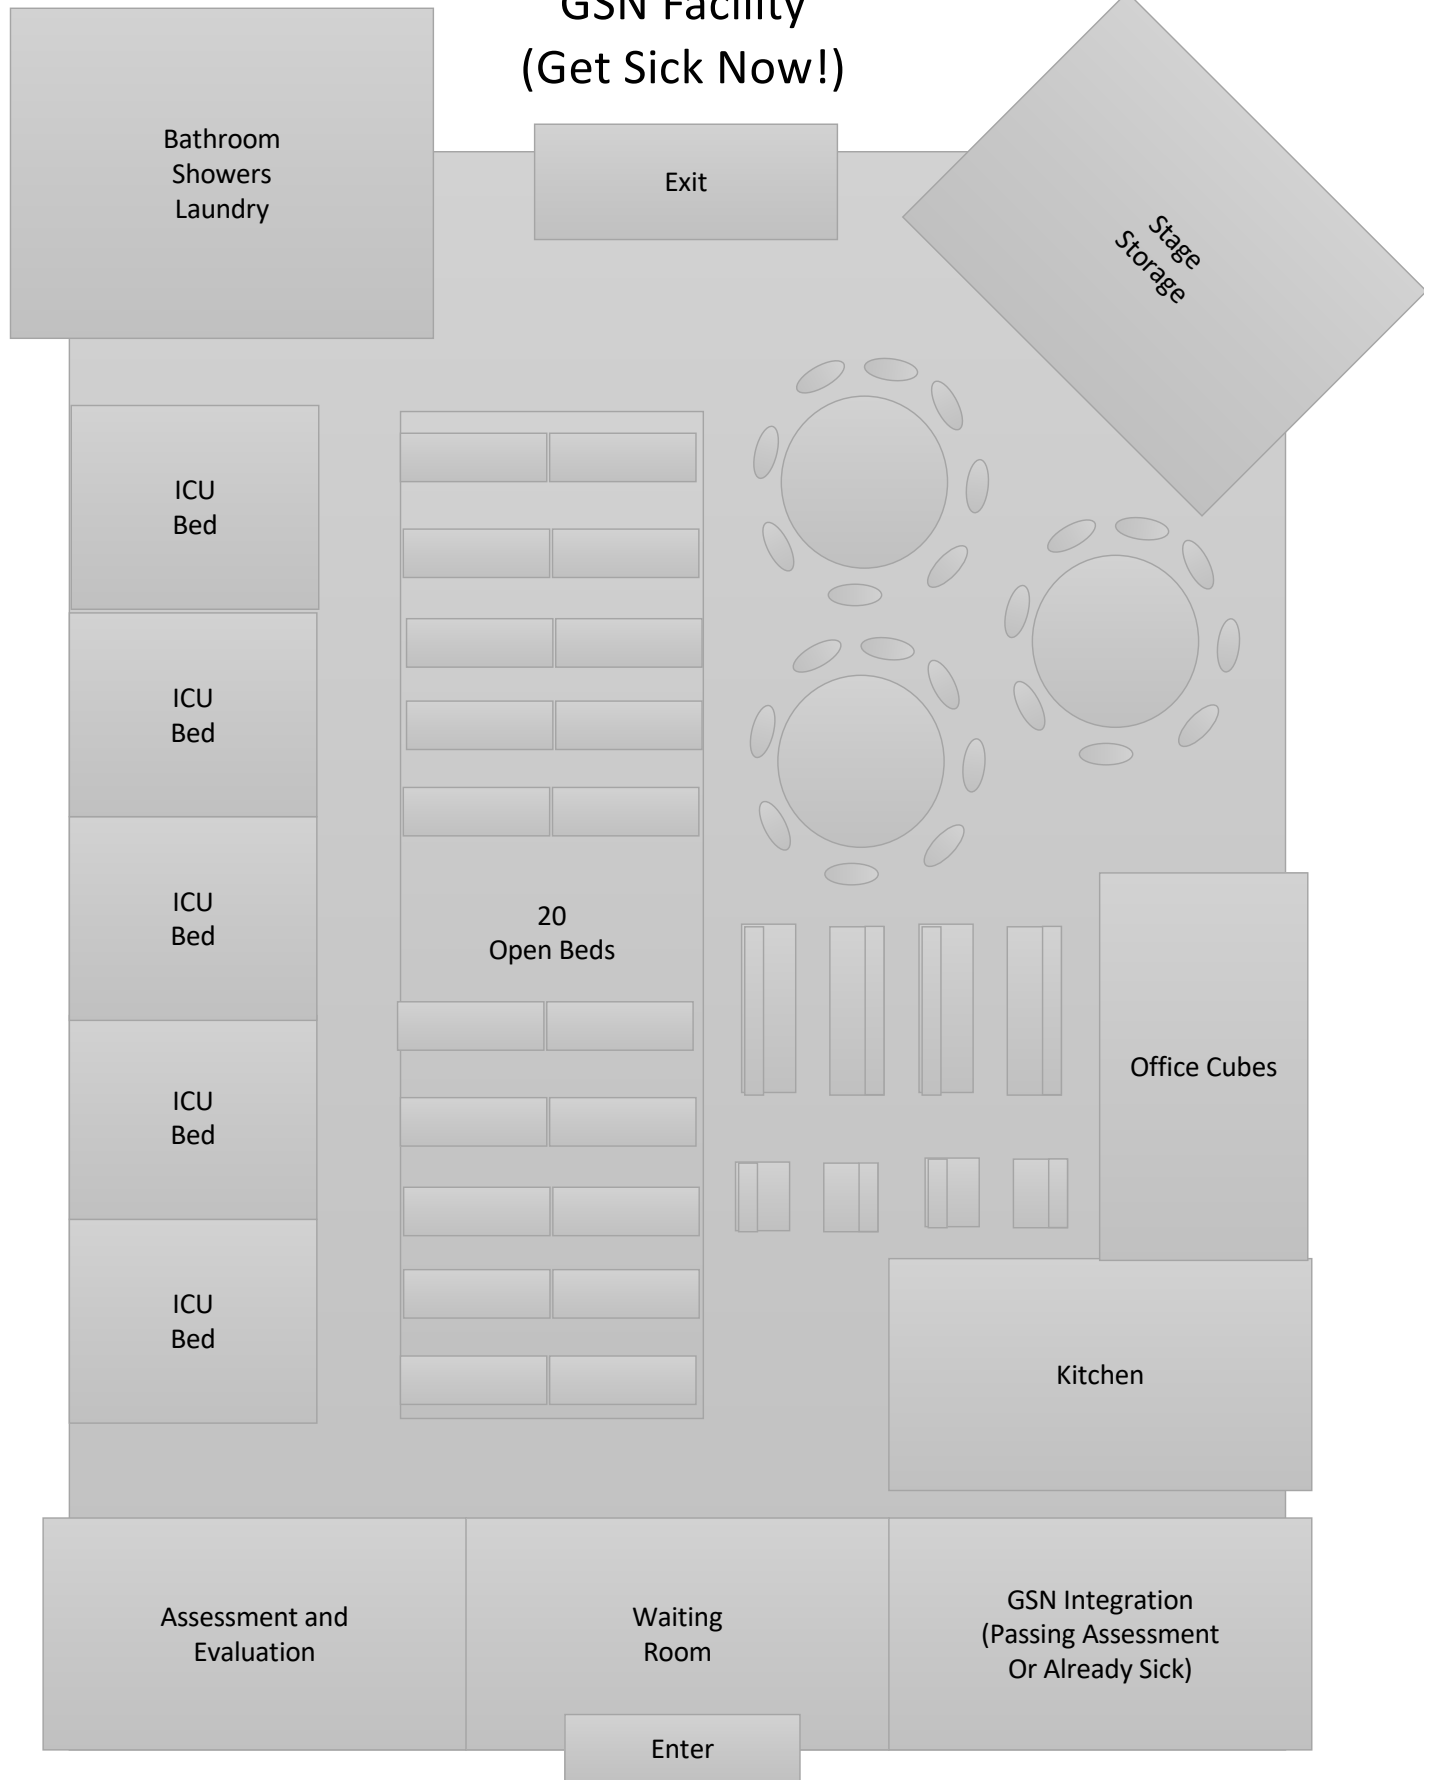

The point where the Natural Immunity Effectiveness crosses the Vaccine Effectiveness:
- SPAR Point (Systematic Positioning of Aggregated Reporting)

The "Range" before and after Spar Point is called the SPAR ZONE. More data is needed to determine what group an individual should choose.

*NOTE: This does not include those with compromised health and immune systems

GSN Facility (Get Sick Now!)

Details at GetSickNow.com

GSN Facility Building Planning Tool for Cities

City Size	30% Compromised	30% in Spar Zone	40% in GSN Zone	6 Month Cycle
1000	300	300	400	1 Facility
2000	600	600	800	2 Facilities
10,000	3,000	3,000	4,000	10 Facilities
100,000	30,000	30,000	40,000	100 Facilities
1,000,000	300,000	300,000	400,000	1,000 Facilities
10 Million	3 Million	3 Million	4 Million	10 K Facilities

In 6-months, a set of cycles can process on average 8 days per 25 people:

- 1) 182 days / 8 days = 22 Cycles at 25 people per cycle = 550 people
- 2) City of 1000 people (with 400 in GSN Zone) you would need to have 1 facility

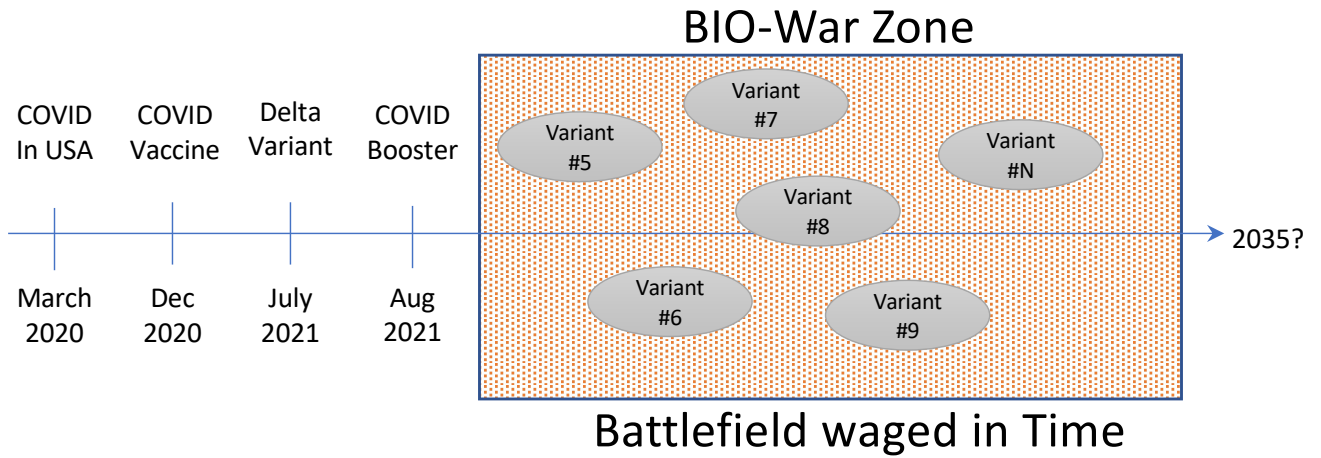

GSN Zone Citizens may consist of mostly Children, so the actual number of people that “Need” to process through Natural Immunity might be around ½ of these numbers.

- Given these numbers between 1 and 5,000 facilities the opportunity is realistic.
- Larger Populations above 100,000 can build larger facilities
 - Instead of 25 people per cycle they can do 100 and cut the buildings by 75%

COVID Battlefield

Defining the Playing Field to Be Oriented

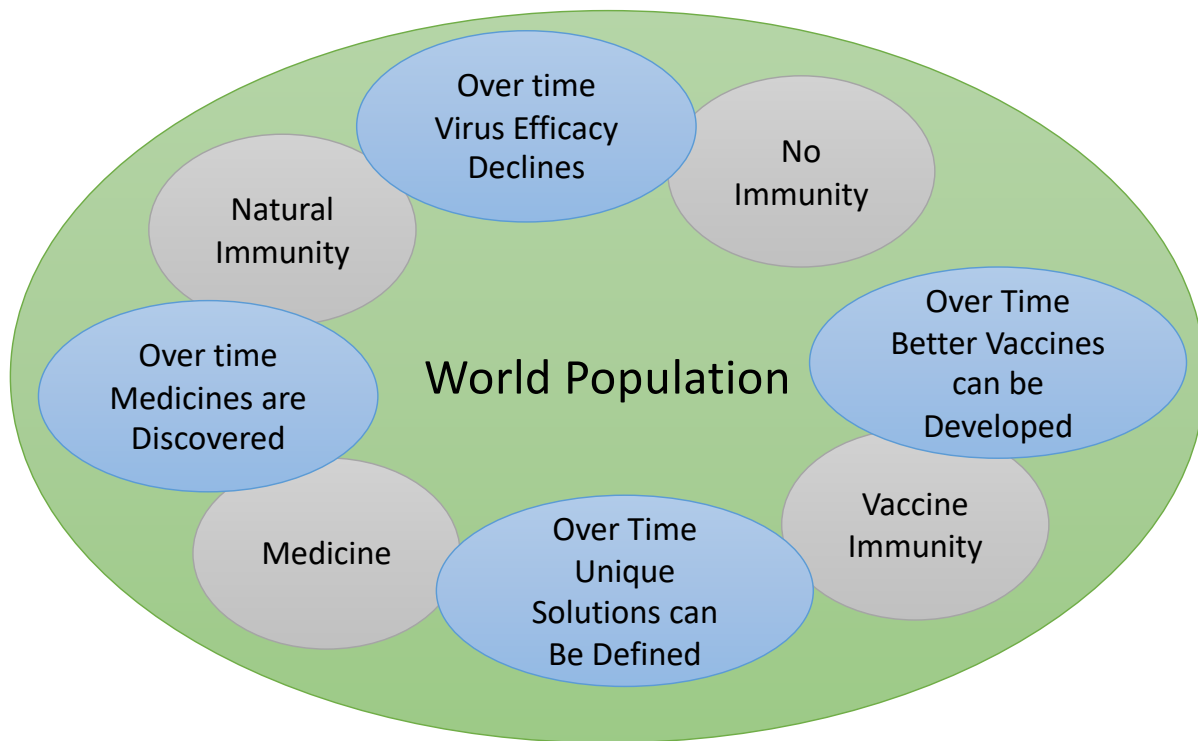

A Sovereign Being's Ethical Map

	Freewill	Responsibility	Logic	Virtue
Freedom →	Yes – Freewill Exists	Responsibility is Required to Guide Freewill	Logic required for Freewill's Expression	Ensure Judgment of actions are in alignment with Freewill
Slavery →	No – Freewill does not exist	No Responsibility for Self and support of Freewill	Deployment of illogical arguments to support one's vices	No Virtuous Actions needed with the need to feed one's vice

A Sovereign Being's Bio-War Decisions

	Freewill	Responsibility	Logic	Virtue
Push Back →	Individual Decisions Required	Responsible for own Safety and Family Health Decisions	Logical decisions include all solutions including natural immunity	No life should be allowed to die alone, solutions that meet that need are virtuous
Acceptance →	Collective Decisions Required	Government is Responsible for Individual and Collective Health	Deployment of illogical arguments to support one's vices	The greater good is the focus and isolation of the sick is required to save the many

Benefits Defined

Push Back

Goal: Natural Freedom

- 1) **Diversity of Solutions Ensure Survivability**
The more people that try different solutions the better solution is found.
- 2) **Elimination of Vaccine Over Use**
The more Vaccines are used the more the body may reduce resistance making reliance on Vaccine Necessary over time
- 3) **Elimination of Lockdowns**
Closing large populations into their homes creates other issues that cannot be rectified and justified – Loss of income, mental health, etc.
- 4) **Exposure to Group Bonding / Spirituality**
The desire and tendency for people to group together to address life threatening issue head on is not only healthy it fosters a larger belief in a Higher Power and increases one's will to live.

Acceptance

Goal: Control the Population

- 1) Reduce Survivability with Endless Stress
- 2) Push for Vaccine Over Use
- 3) Enforce Lockdowns
- 4) Break the natural Bonding / Spirituality

Bio-War Risks Defined

Random Virus Generation

- 1) Traceable to Animals
- 2) Steep Decline in Efficacy
- 3) Relatable with another Virus
- 4) Traceable Progression of Outbreak

Risks

- 1) Old and Infirm at Risk
- 2) Time to Resolve Effective Vaccine
- 3) Managed population infections

Situation	Benefit
Human Interaction with Animals, results in Human Contamination	No Benefit – Natural Course of Human Existence on Earth
Viruses maintain slowly evolving changes over time	Allows Medical Community to develop Vaccines and Medicines predictably
Old and Infirm are at Risk of infection and Catastrophic Results	No Benefit – A portion of the population should take precautions and plan for end-of-life events
Viruses distributed through population part of natural environment	Enhanced Immune System as People engage more Viruses through time and build immunity to those infections

Virus as Bio-Weapon

- 1) NOT Traceable to Animals
- 2) Reported Increase in Efficacy
- 3) No Relation to another Viruses
- 4) Non-Traceable Outbreak

Risks

- 1) Old and Infirm at Risk
- 2) Delayed Time to Effective Vaccine
- 3) Un-Managed population infections

Situation	Benefit
Development of Viruses for Research for Biological Weapon results in wide spread infection in population	<u>Population Control:</u> Countries with limited capacity to care for old and infirm will have a means to dispose this portion of the weakest population
	<u>Adversary Impacts:</u> Countries that are at odds with another country can experience social and political destabilization
Development of DNA Sequence Virus Carrier/Platform	Platform allows multiple Viruses to be created to infect different populations
Multiple Booster Shoots are needed to continue to manage impact of Virus	Ongoing training of the Human Immune System can be compromised as time passes and the natural immunity for those that have it, can be diminished and follow-up Viruses will be more deadly.
